

CS/EE/IDS 166 Report 3

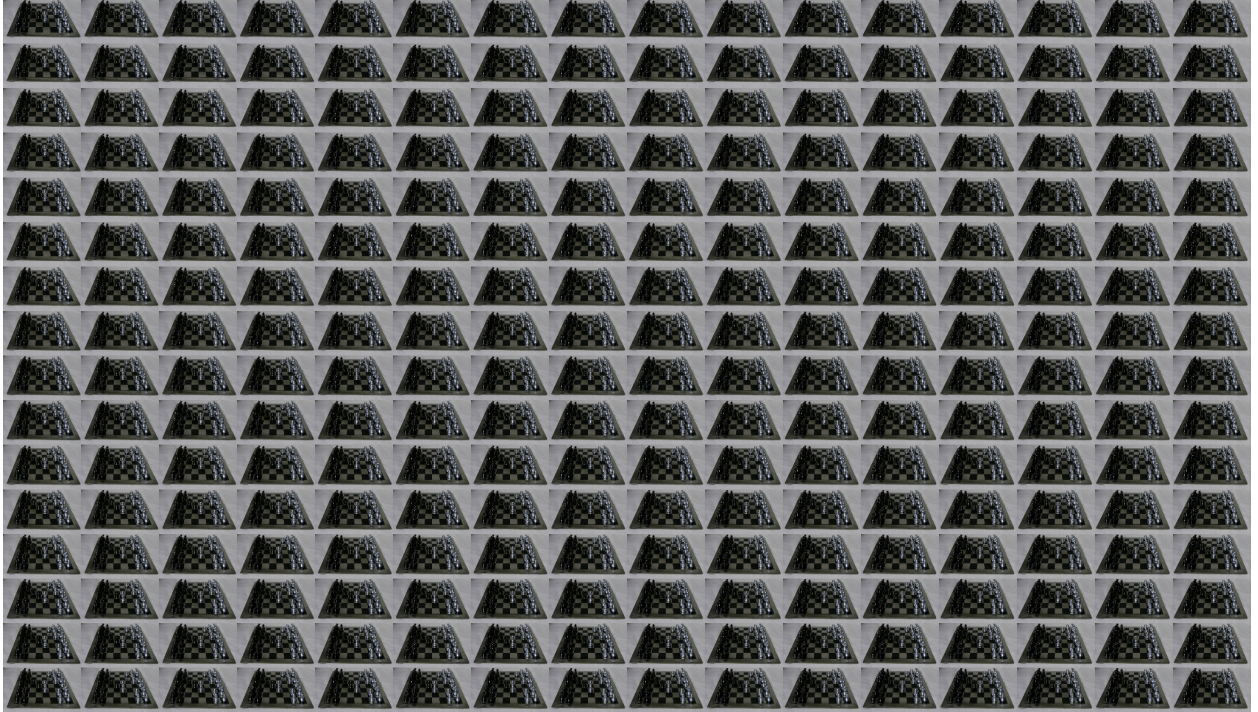

Ola Amr

5/5/2026

Spent ~7 hrs on this homework

(The set also said to include the amount of time spent on the bonus, but there was no bonus)

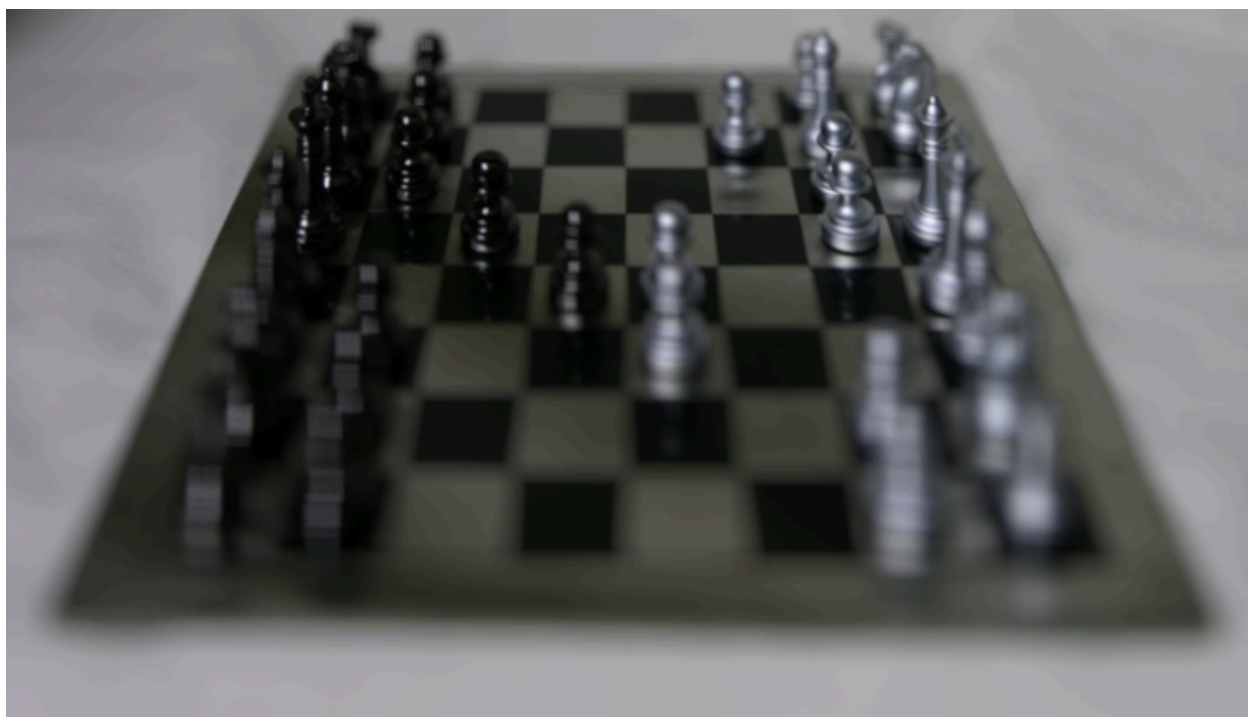

Q1.

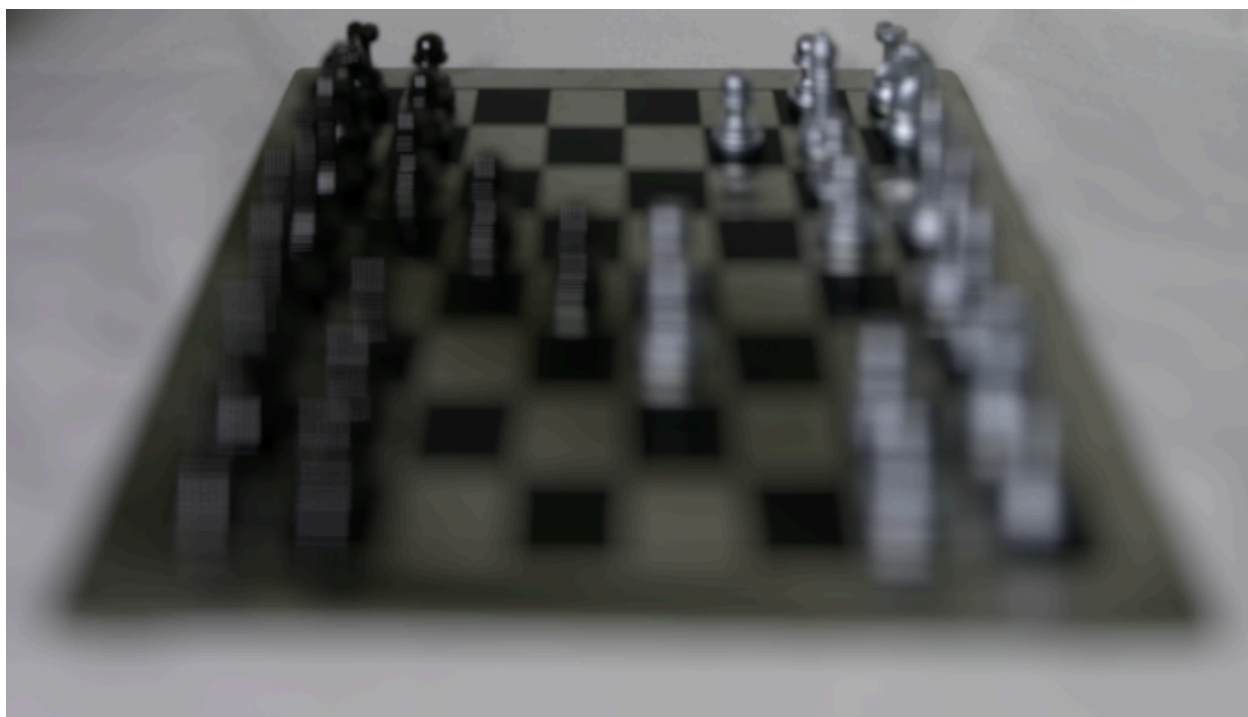

Q2.

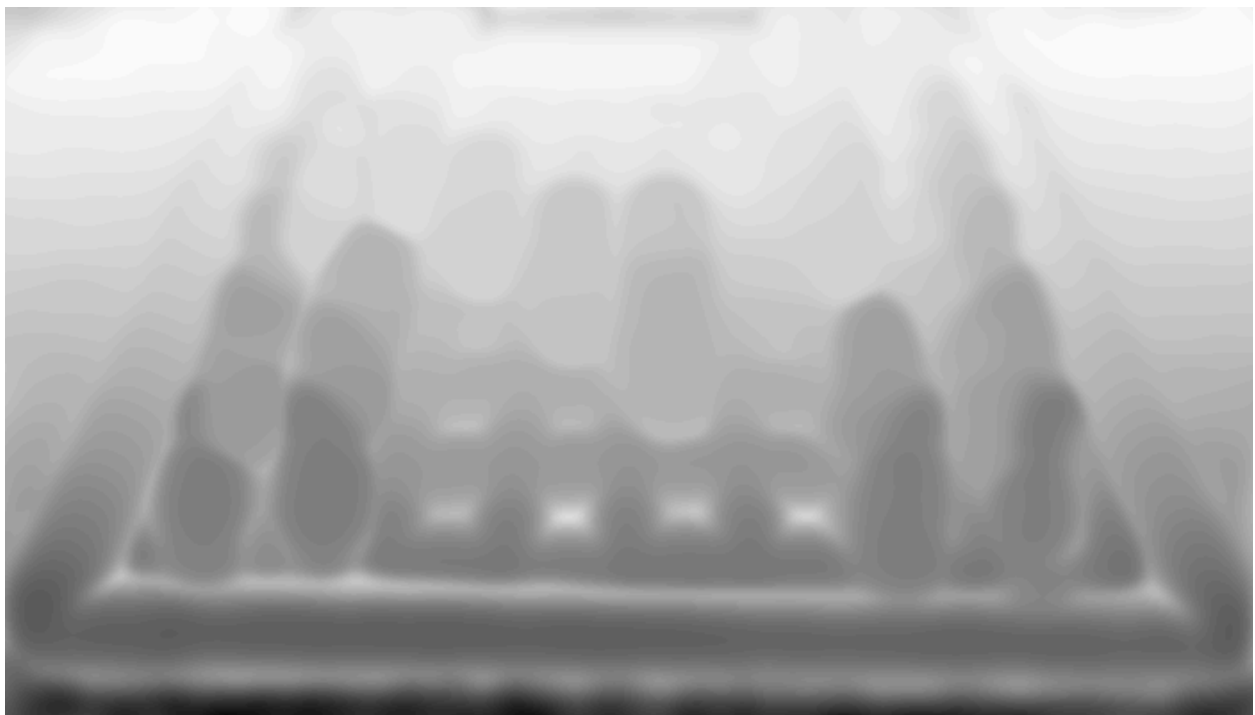

Q3.

Q4.

I think the depth is wrong in the parts of the image with the flat squares of the board and some smoother parts of the pieces, mostly closer towards the top of the image. In those areas, I don't think the method can really pick one clear depth because multiple depths

give similar responses, so the weights kind of get spread out and it just ends up looking unclear. The all in focus image still looks sharp and consistent in those same regions, without the weird washed out look that doesn't show the depth like in the Q4 image. I think that's just because it just combines the images instead of choosing one depth, so it stays smooth even where the depth map looked off.

Q5.

Frame 00:

Frame 20:

Frame 40:

Frame 60:

Frame 80:

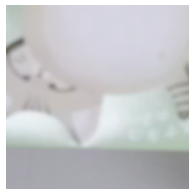

Frame 106:

Q5.

Template:

Chose a section of the cat stand

Composite Image:

The image of the cat in the center looks how it did in the other frames but the other objects and stuff in the background all look somewhat blurred now
